

## Benefits of In-Season Foliar Nutrients

Brad Bischof, Nutrien Ag Solutions - Big Lake, MN

In-Season nutrient applications are a staple for many specialty grower's production plans. There is an excess of products in the industry which focus on "Higher Yields" but can cause a distraction if a grower does not have a plan going into a growing season. Balancing Macro-nutrients, soil sampling, & crop monitoring can help make decisions about in-season nutrient applications proactive instead of reactive. At Nutrien Ag Solutions we focus on the following key product classes; root growth stimulants (Radiate), nutrient mobility products (Inositol Family), & Carbon/Humic acid technology to increase efficiency of nutrients stuck inside the soil.

Brad Bischof is the Location Manager at Nutrien Ag Solutions in Big Lake, MN. He started working for Nutrien as an intern when he was attending college at North Dakota State University. Currently, he works with many potato & vegetable farmers in Sherburne County, MN, where they focus on crop planning, production efficiency, & return-on-investment.
