

# Nano Enhanced Foliar Agricultural Inputs

Marcus Janssen, Crucible Ag - Winside, NE

Nano enhanced fertilizers are changing the way growers deliver nutrition to their crops both via foliar methods, in furrow, or via drip and field applications. Crucible Ag will provide an introduction to nano technology uses in agriculture and explain the ways that it is an innovative solution to challenges faced by growers large and small.

United States Marine Corps Veteran Marcus Janssen and his wife Michelle Roccio Janssen are the owners of Crucible Ag. When founding the company in 2012, their goal was to provide growers with a way to solve complex problems in agriculture with cost effective and environmentally sound solutions. Today, they partner extensively in North America and abroad with growers and corporations to bring nano enhanced crop nutrition to the forefront of modern agriculture.
